1. The situation in the field of superphosphate production has changed in the course of 1951. Because of shortages in phosphate minerals,  $P_2O_5$  output will not be higher than 80,000 tons.
2. The Leunawerk production has risen and will probably reach about 150,000 tons of  $N_2$  equal to 750,000 tons of fertilizers as ammonium sulfate or other fertilizers based on  $N_2$  content.
